

What is claimed:

1 1. A chuck for a manual or powered driver having a rotatable drive shaft, said chuck  
2 including:

3 a body, said body including a front section and a rear section;

4 a plurality of jaws operatively associated with said body, said jaws being adapted to  
5 engage a tool to be utilized by the driver;

6 serrations disposed circumferentially about, and rotationally fixed with respect to, and  
7 extending outwardly away from, said rear section of said body; and

8 a sleeve member pressed onto said serrations whereby said serrations dig into said  
9 sleeve to at least assist in rotationally securing said sleeve to said body.
